

PAPER REEL CORE PROBE

TECHNICAL DATA SHEET - Paper Reel Core Probe

Application:

- ▼ Paper reel lifts up to 4t SWL
- ▼ 3 and 4 inch cores

Checkmate Flexible Engineering, has developed a lightweight probe for use on 3 and 4 inch inside diameter reel cores. Specially shaped jaws which distribute gripping force evenly make for easy disengagement and minimise tube damage whilst providing high slip resistance.

The latching system is also new and is designed for simplicity and reliability with no need for air supply. Disengagement is simple, with an action which can only take place once the reel is grounded and the load is safe.

Gripper changes are easy and there is no need for adjustment or set up.

Construction:

- ▼ All steel, powder coated where appropriate.
- ▼ Load bearing parts are proof tested.
- ▼ Hardened grippers.

Safe Working Load:

- ▼ 4000 kgs.

Dimensions and Weight:

- ▼ Length of probe: 60 cm.
- ▼ Length overall: 100 cm.
- ▼ Grippers: 3" and 4" available.
- ▼ Weight approx. 38 kg.

Checkmate Quality:

Checkmate operates a quality management system under ISO 9001 which is certified by SGS, a UKAS registered company. Checkmate is a recognised supplier to the UK and overseas MoDs.
